

The Country Club Primrose Pond Dredge, Brookline, MA – After

ACEC/MA 2023 Engineering Excellence Award Recipient

The Country Club Primrose Pond Dredge, Brookline, MA – Before

We'll help care for the campus, so you can best care for the course

For over 15 years, SumCo Eco-Contracting has constructed best-in-class, ecological-minded solutions for New England golf clubs.

Our team works closely with owners, directors, superintendents, and project partners to ensure that work is done efficiently with minimal impact to your course and the least possible disruption of play. SumCo's experience with wetland mitigation and restoration combined with our understanding of regulatory requirements ensures better outcomes and efficient project implementation.

“ Every day, on every project, we are helping to create a more adaptive, resilient, and sustainable world. ”

Our golf course expertise includes:

Ponds

- Pond creation and expansion
- Dredging & dewatering
- Liners
- Bank stabilization

Drainage

- Irrigation intakes
- Pump stations
- Culverts
- Stormwater
- Dam rehab
- Floodgates

Access

- Boardwalks
- Bridges
- Foot & cart paths
- Timber supported paths

Wetlands

- Mitigation
- Stream daylighting
- Invasive species management
- Native Plantings

Coastal

- Stabilization
- Sand nourishment
- Sea walls
- Living shorelines
- Dune restoration

The Country Club Primrose Pond Dredge – Brookline, MA

Work included mechanical dredging of several thousand cubic yards of organic matter & sediments, excavation and restoration of the eroding pond edges. SumCo also installed a helical pile-supported boardwalk for access across the pond. The work improved flow of a natural watercourse, increased water quality in the pond as well as the adjacent wetland. We stabilized the entire perimeter of the pond edge to ensure minimization of erosion and improved the hazard across several of the course's holes.

Franconia Irrigation Pond Maintenance Dredging – Springfield, MA

This project consisted of maintenance dredging of Franconia irrigation pond. SumCo took careful precautions to protect surrounding area by installing temporary construction mats, turbidity curtains, and implemented erosion control efforts before dredging the pond. We removed and transported approximately 1,400 cubic yards of sediment to another area where it was reused.

RI Country Club Golf Course and Salt Marsh Restoration – Barrington, RI

Work included a tidal gate replacement, dredging, wetland restoration, and a new boardwalk. SumCo dredged the creek bed from the tidal gate out to the Bay, allowing the water to easily flow in and out of the marsh and create fish passage through the marsh. 2.5 acres of new marsh were created through this project.

Putterham Meadows Golf Course (Phase 1 & 2) – Brookline, MA

The first phase of this project consisted of the dredging, management, and disposal of 950 CY of Chlordane-impacted sediment from creeks. Phase 2 consisted of daylighting of 510 LF of culverted creeks as well as dredging of 1,350 CY of additional sediment to restore flow and drainage. SumCo also added a new accessible path, rebuilt the causeway, and replaced a footbridge and railings to meet current building codes.

Other Work

Woburn Country Club 9th Fairway Pond Dredge – Woburn, MA

Concord Country Club Ponds 1 & 2 Dredging – Concord, MA

Tedesco Country Club Pond Dredging – Swampscott, MA

Boothbay Harbor Country Club Pond Construction – Boothbay, ME

Oakley Country Club Irrigation Pond Expansion, Liner & Stone Wall – Watertown, MA

Walpole Country Club Pond Dredge, Cart Paths, and Wetland Benches – Peabody, MA

Woodland Country Club Pond Dredge – Auburndale, MA

Haverhill Country Club Outlet Structure Repair – Haverhill, MA
